Направление подготовки (специальность) 10.05.03 Информационная безопасность автоматизированных систем

## Отчет

## по практической работе №2

Выполнил студент гр. <u>УБ-11</u> Долгих Е.И.

Проверил: ИБ Денисенко В.В

# Введение

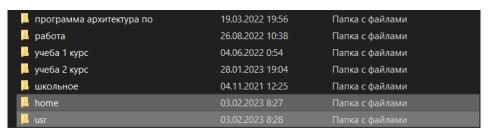

Цель работы: установка локального web-сервера и его компонентов.

# Порядок выполнения:

- 1. Структура каталогов
- 2. Установка Арасће
- 3. Установка РНР
- 4. Установка MySQL
- 5. Установка SendMail
- 6. Установка SMTP сервера

#### Основная часть

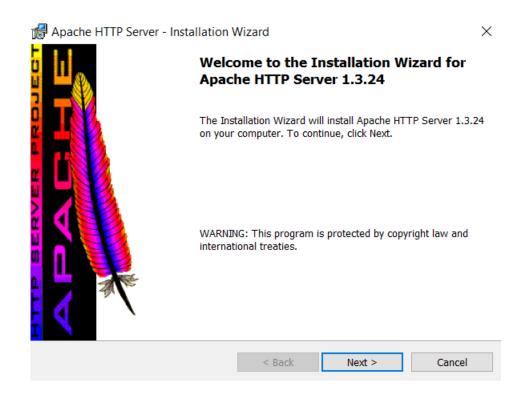

1. Создаем 2 каталога для дальнейшей работы.

2. Запускаем файл инсталляции «apache\_1.3.24-win32-x86-no...»

InstallShield Wizard

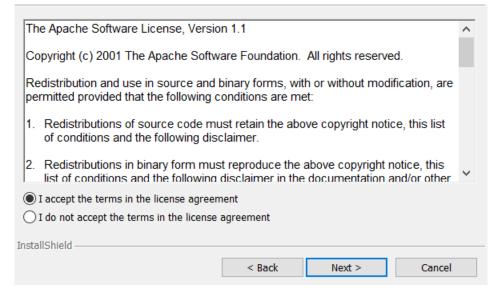

#### License Agreement

Please read the following license agreement carefully.

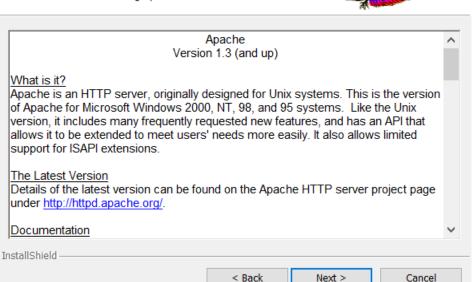

Cancel

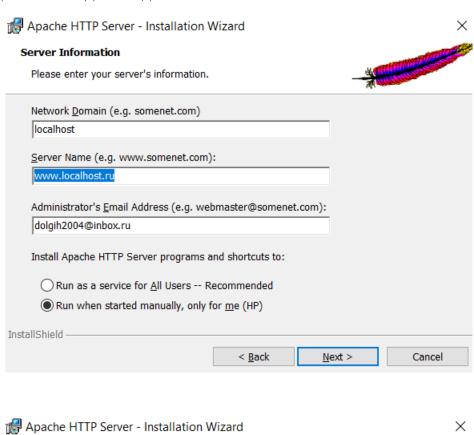

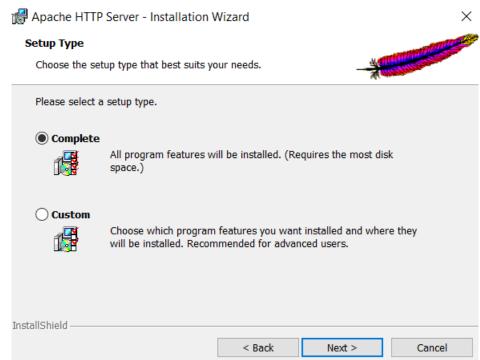

#### Read This First

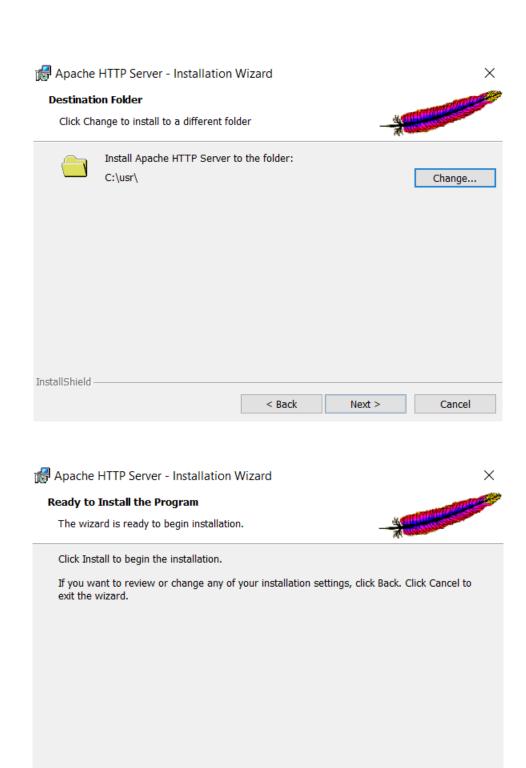

Read this Before Running Apache on Windows.

### 3. Вводим необходимые данные.

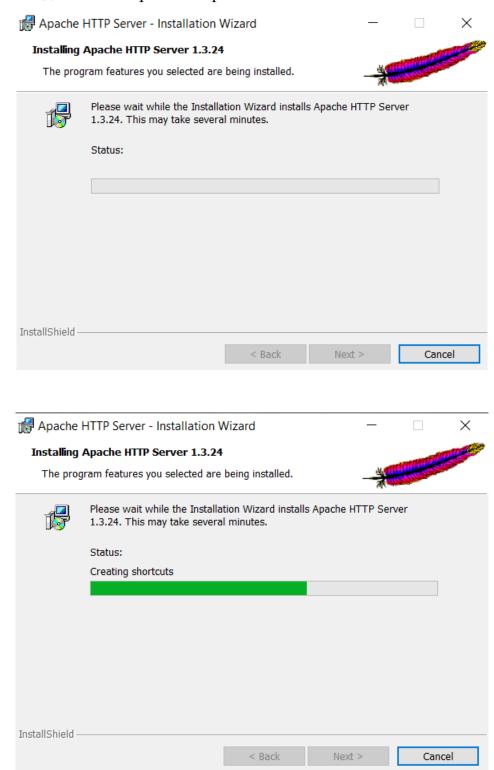

< Back

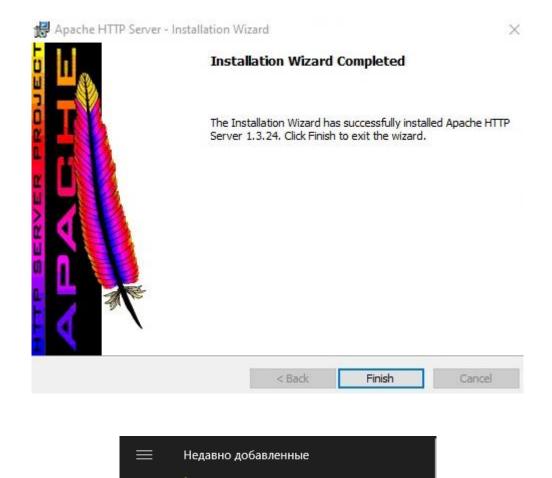

Install

Cancel

InstallShield

# 4. Производиться копирование файлов.

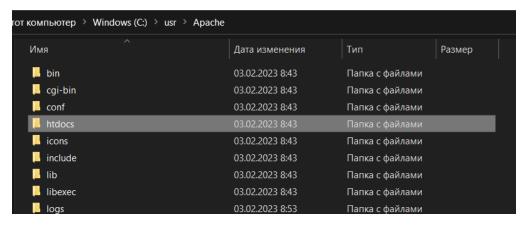

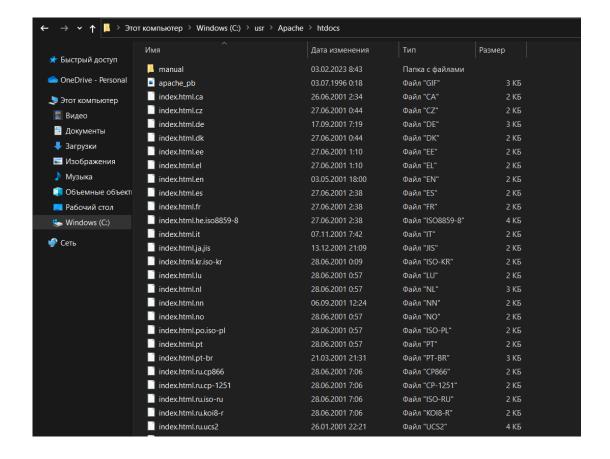

Test Configuration

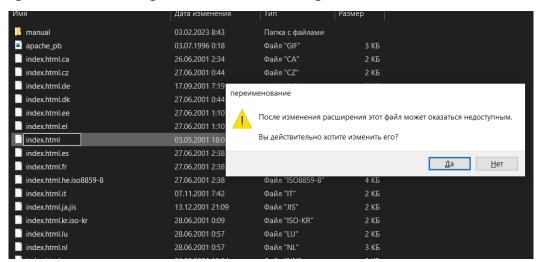

Start Apache in Console

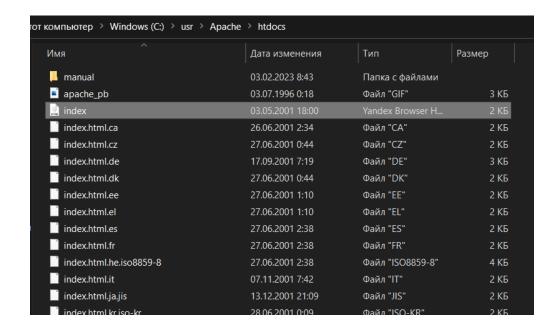

5. Начинаем подключаться к Web-серверу Apache.

6. Переименовываем файл index.html.en в файл index.html.

#### 7. Запускаем браузер.

If you can see this, it means that the installation of the Apache web server software on this system was successful. You may now add content to this directory and replace this page.

Seeing this instead of the website you expected?

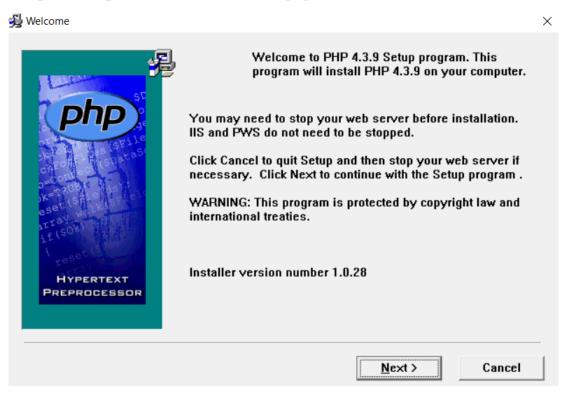

This page is here because the site administrator has changed the configuration of this web server. Please contact the person responsible for maintaining this server with questions. The Apache Software Foundation, which wrote the web server software this site administrator is using, has nothing to do with maintaining this site and cannot help resolve configuration issues.

The Apache documentation has been included with this distribution.

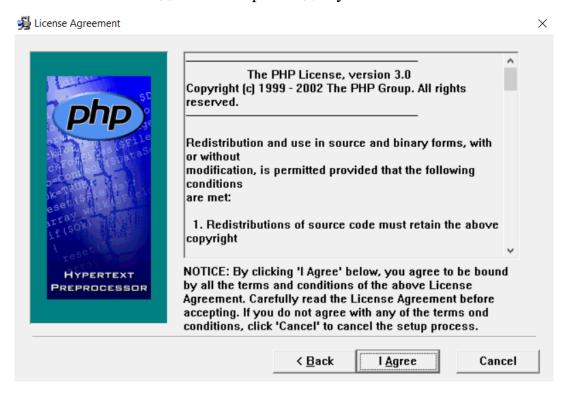

You are free to use the image below on an Apache-powered web server. Thanks for using Apache!

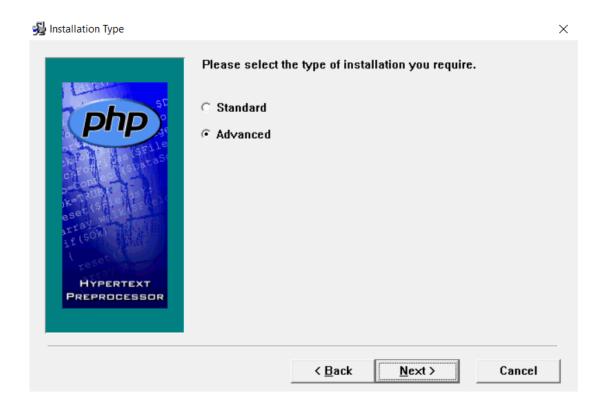

Powered by PACHE

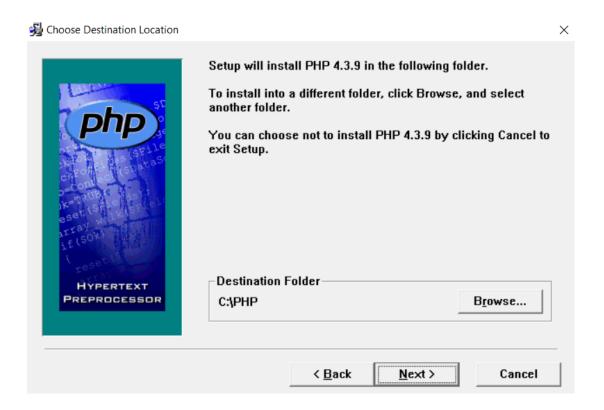

## 8. Открываем файл для инсталляции php.

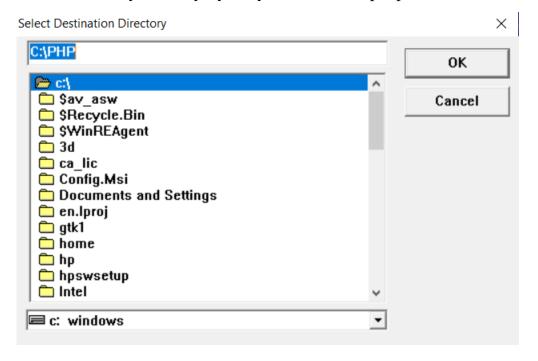

### 9. Выполняем необходимые настройки для установки.

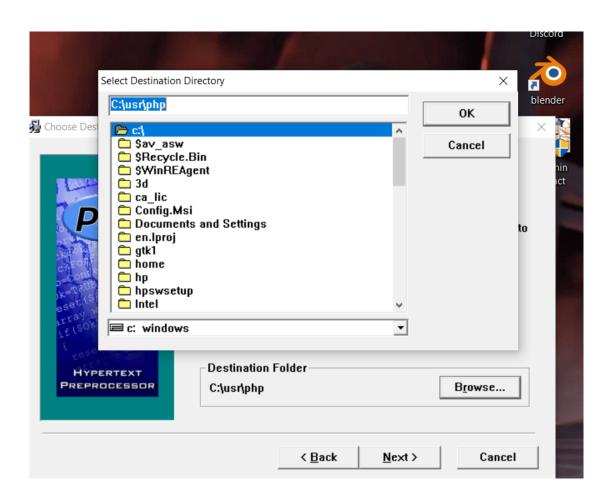

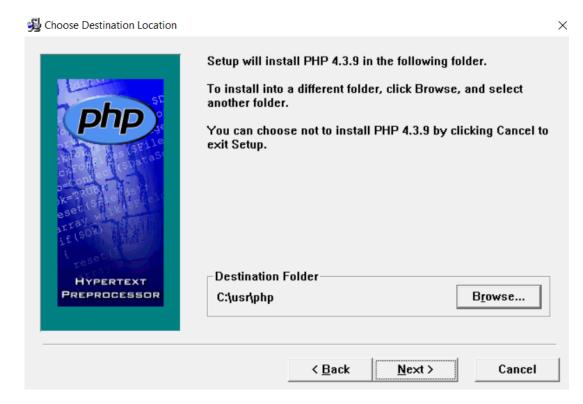

10. Указываем в какую папку будет установлена программа.

This installation program can create backup copies of all files replaced during the installation. These files will be used when the software is uninstalled and a rollback is requested. If backup copies are not created, you will only be able to uninstall the software and not roll the system back to a previous state. (Note that while files and registry settings will be restored, the configuration of PWS on NTWS/W2K, and of IIS on any platform - will not be restored when PHP is uninstalled, regardless of settings here!)

Do you want to create backups of the replaced files?

Yes

○ No

Please select the directory where the replaced files will be copied.

Backup File Destination Directory
C:\usr\php\BACKUP

B<u>r</u>owse...

≺ <u>B</u>ack

Next >

Cancel

X

Choose a directory for use as a temporary directory for file uploads.

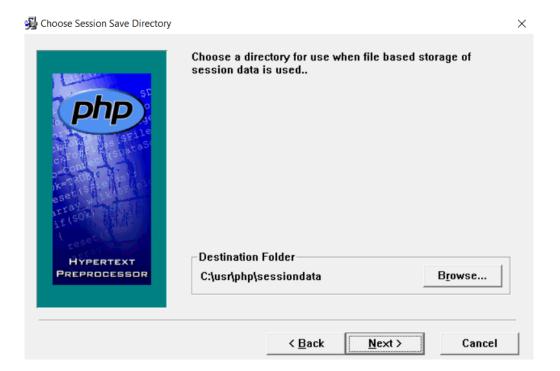

Destination Folder C:\usr\php\uploadtemp

B<u>r</u>owse...

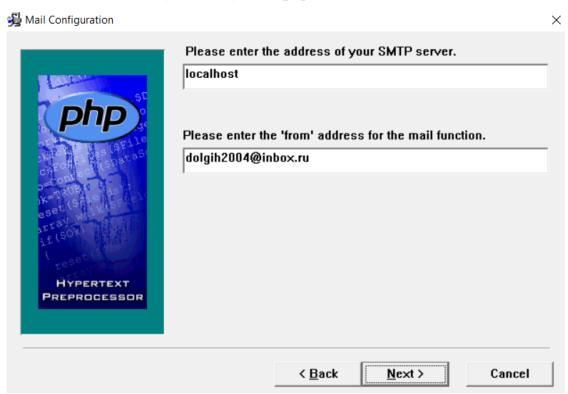

≺ <u>B</u>ack

Next >

Cancel

11. Вводим необходимую личную информацию.

Please select the level of error reporting you require.

X

 Display all errors warnings and notices (strongly recommended during development)

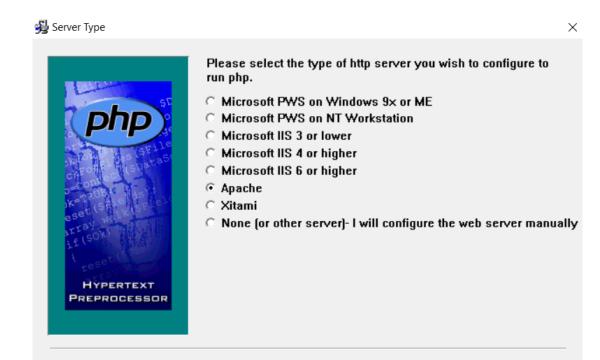

≺ <u>B</u>ack

install ok: PEAR 1.3.1
install ok: Archive_Tar 1.1
install ok: Console_Getopt 1.2
install ok: XML_RPC 1.1.0
install ok: DB 1.6.1
install ok: Net_Socket 1.0.1
install ok: Net SMTP 1.2.5
install ok: Mail 1.1.2
install ok: XML_Parser 1.0.1
```

#### 14. Начинаем установку MySQL. Запускаем setup.exe.

## 15. Выполняем необходимые настройки для установки программы.

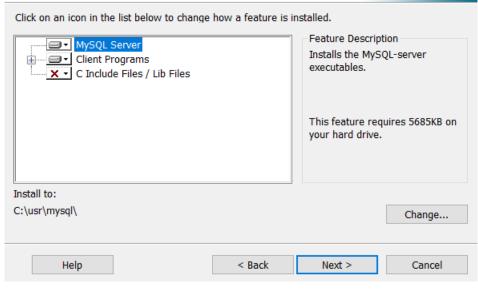

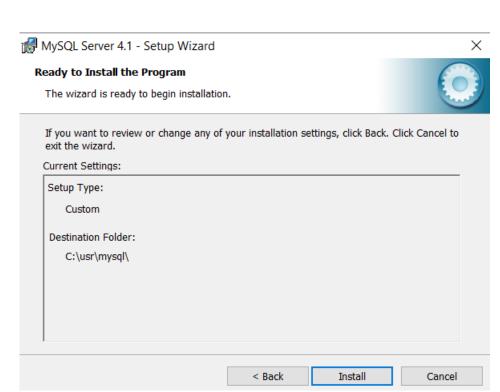

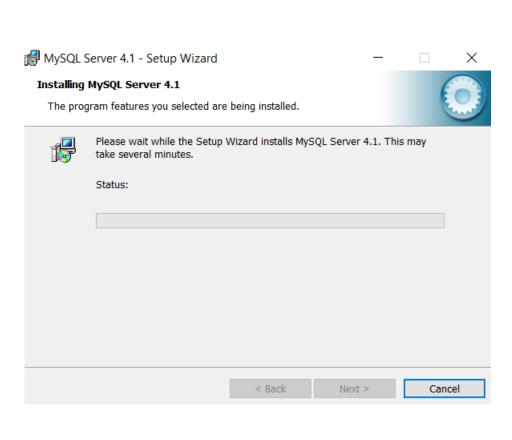

#### **Custom Setup**

Select the program features you want installed.

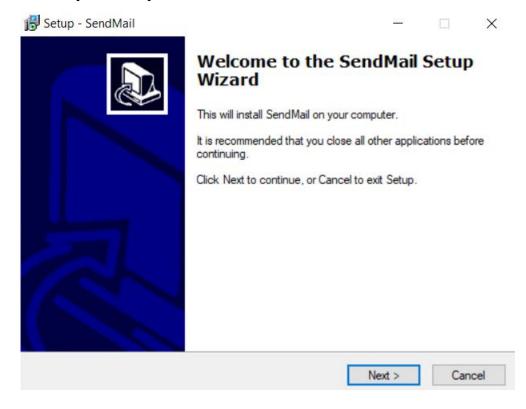

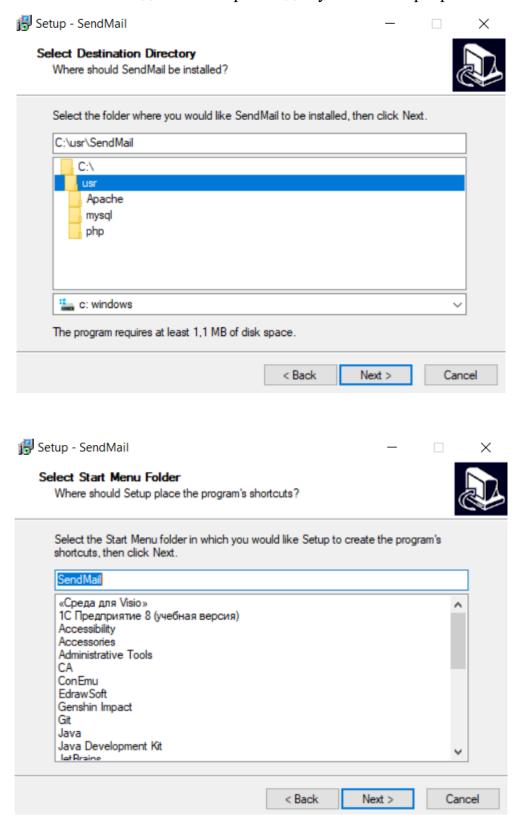

## 16. Начинаем установку Send Mail.

### 17. Выполняем необходимые настройки для установки программы.

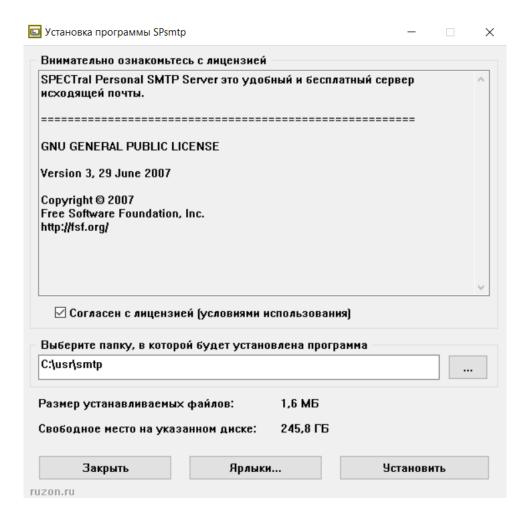

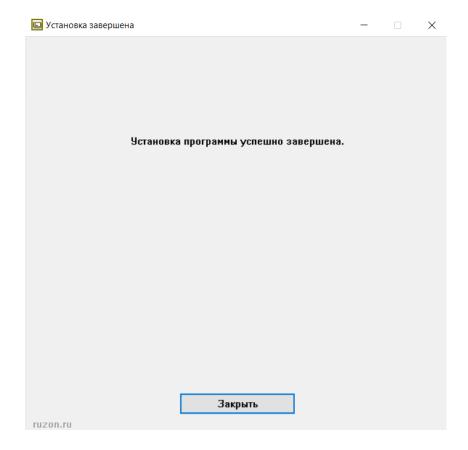

#### Ready to Install

Setup is now ready to begin installing SendMail on your computer.

# Вывод

В ходе выполнения данной практической работы мы ознакомились с предложенным теоретическим материалом. Успешно установили «Apache», «PHP», «MySQL», «SendMail» и «SMTP сервер».
